

Baskets to meet every requirement

The complete Cameron range of baskets extends into hundreds, and that's only accounting for variations in size and partition configuration. In addition you can specify the wall height, alternative lengths of burner support poles and wires, suede or leather padding, side wall cushions, cushion flooring, passenger seats and seat belts, GPS mounting pads, elegant coloured stripes or larger areas of woven colour. If you have a special requirement, please talk to us about it.

Most baskets are woven from a combination of Somerset willow and top quality Kooboo, Palambang and Tahitian cane. Why? Because balloon baskets lead a hard life and these traditional materials have shown themselves to be extremely resilient. Larger baskets for passenger ride operations are often all cane because of its greater strength, and this option is available on other sizes, though it does have a weight penalty.

Floors can be woven, which helps absorb shock and reduce weight, or solid to improve rigidity. Even the runners on the bottom of the basket are cut from highest quality kiln dried ash, chosen for its suppleness and durability.

Cameron also offers a number of special purpose baskets. Transportable models will fit into an estate car or aircraft hold - complete with burner and fuel cylinders. We have a basket that allows a disabled person to pilot a balloon from a built-in seat equipped with remote controls while another variant has a door to provide access for one or more wheelchairs.

This leaflet can only give you a flavour of the range and quality of the burners, baskets and fuel systems that complement Cameron's world leadership in envelope technology. If you need further information please don't hesitate to contact our Sales Department or the global Cameron dealer network.
